## ENVIRONMENTAL POLICY

CAC GAS & Instrumentation Pty Ltd takes great pride in minimising the impact of our activities and solutions on the environment.

We do so as an organization by;

- Minimising waste by evaluating operations and ensuring they are as efficient as possible.
- Minimising toxic emissions through the selection and use of filtration systems to capture gas mixtures from our cylinder recycling program
- Implementing our cylinder reduction and recovery programs as a key part of our business.
- Actively promoting our recycling program with all customers to minimize the number of cylinders going into landfill. Reuse and/or recycle all cylinders.
- Evaluating customer applications to maximize the efficiency of calibration gas systems thereby reducing the number of cylinders used.
- Developing customer consumption programs to reduce the frequency of deliveries thereby reducing vehicle emissions.
- Source and promote a product range to minimise the environmental impact on both operations and distribution.
- Regularly review our business practices and determine whether each practice is suitable in an environmental context.

All members of CAC GAS have a commitment to reduce waste and lower the impact of our activities on the environment.
